FinTrust | Data decisions

Release 1 | Planning and design evidence | 12 October 2026

Bad file: reject. Bad row: quarantine. Good unique row: process. Risky good row: investigate. LOW stores without routine review; MEDIUM opens review; HIGH opens review and the alert path.

Three separate decisions

Validity: can the row be processed? Identity: is this a new financial event? Risk: should a valid event be investigated? A duplicate is not a new ledger event; HIGH risk is not invalid data.
